Installing Early Migration Registration Request Module in Drupal 8
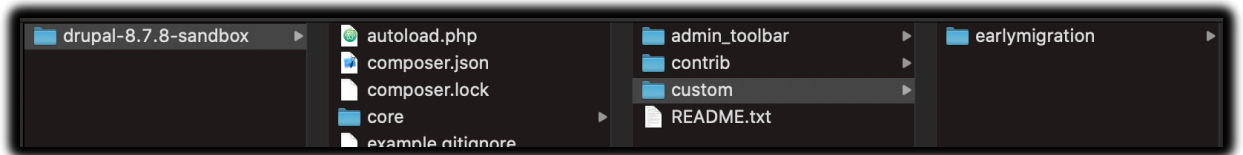

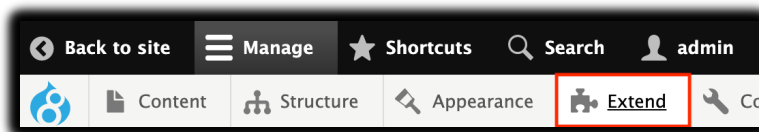

- **Download the compressed module earlymigration.zip from:**

  https://github.com/morganseangibbs/misc

- **Unzip the module**

- **Move the unzipped earlymigration folder to \\Drupal main site folder\modules\custom**

NOTE: If the custom folder does not exist, create it and then move the module folder inside

- **Open your Drupal webpage**

- **Navigate to Manage > Extend**

- **Find *Early Migration Registration Request* on the module list, then check the box**

- **Scroll down to the bottom of the page, then click Install**

- **You should see the following message:**

  ✓ Module *Early Migration Registration Request* has been enabled.

  NOTE: If you receive an error, please reference the troubleshooting document

- **Navigate to the module page, which should be in the format**
  <your domain name>/migration

  For example:

  dsandbox.dd:8083/migration

- **If the module is working, you should see the following form:**

Register for early migration to the new website
